

# SPRAY- PLAST

## Level 5 Primer/Surfacer

### DESCRIPTION

**SPRAY-PLAST** is an interior, high solids, level 5 drywall primer/surfacer that when applied over a level 4 gypsum board finish, in accordance with GA-214/ASTM C-840 gypsum board finish specifications, achieves a level 5 finish which is the highest quality drywall finish. **SPRAY-PLAST** is specifically formulated to equalize the porosity difference between the wallboard surface and joint compound, which will allow for final coat(s) of paint to dry at a uniform rate.

### ADVANTAGES

**SPRAY-PLAST** is an economical, easy to sand, level 5 primer/surfacer that is designed to eliminate joint flashing and hide minor surface imperfections, while replacing primer and/or first coat of paint. Reduces sanding prior to paint application, when applied properly. It also eliminates a costly two-step process of a skim coat over the entire gypsum board surface and primer coat, in one spray application. **SPRAY-PLAST** is ideal for new drywall on all residential and commercial projects.
