

# SPRAY- PREP

## High Build Drywall Primer

### DESCRIPTION

**SPRAY-PREP** is a high build drywall primer/surfacer that is specifically formulated to fill the pores and equalize the porosity difference between the gypsum board surface paper and joint compound. **SPRAY-PREP** is to be applied as a first coat to the entire prepared gypsum board surface and skim coatings to help minimize most decorating problems, prior to texturing and/or painting.

### ADVANTAGES

**SPRAY-PREP** is a high hide, fast drying and economical drywall primer/surfacer that minimizes joint banding and photographing. Because of the solids and superior coverage, a single pass application equals several coats of conventional paint. **SPRAY-PREP** is designed to achieve a dry film thickness superior to most high build and/or paint primers.
