

SPRAY-PLAST

Level 5 Primer/Surfacer

PRODUCT DESCRIPTION

TWI Next Level BRAND SPRAY-PLAST is an interior, level 5 primer/surfacer to be applied over new gypsum wallboard. When applied over a level 4 gypsum board finish, in accordance to Gypsum Association publication, *Recommended Levels of Finish for Gypsum Board GA-214/ASTM C840* specifications, it achieves a level 5 finish which is the highest quality gypsum board finish. In one spray application, *TWI Next Level BRAND* SPRAY-PLAST replaces the traditional, costly, and labor intensive, skim coat of joint compound and a coat of primer. *TWI Next Level BRAND* SPRAY-PLAST has great wet hide and provides a smooth, sandable surface. *TWI Next Level BRAND* SPRAY-PLAST hides minor surface imperfections and is designed to equalize porosity and suction differences between the gypsum wallboard and joint compound. This allows the paint to dry at a uniform rate for better paint coverage and minimize joint banding, flashing, and photographing under critical lighting conditions.

TWI Next Level BRAND SPRAY-PLAST is ideal for single family, multi-family, hotels, resorts, military, health care, schools, restaurants, and other high traffic or commercial construction.

ADVANTAGES

- Achieves Level 5 finish faster than hand application with joint compound
- Easy to Sand
- Replaces skim coat of joint compound and prime coat in one spray application
- Hides Minor Surface Imperfections
- Minimizes Joint Flashing and Photographing
- Low VOC
